TRANSFORMER PROTECTION TECHNOLOGY - COMBINED CUT OUT FUSE AND DROP OUT SURGE ARRESTOR (COMBI UNIT)

ZETDC has over the last two years piloted the above technology to protect transformer installations from lightning and surges. The technology was deployed at our hotspots where transformer losses were frequent.

From installation to date the Combi Unit has improved line performance, reduced outages and also resulted in zero transformer losses where it is deployed. We have found it very safe for our employees as it is easy to maintain. We note that older systems can be refurbished and new installations can benefit immensely from this technology. The Technology was supplied to us by Merchant Links (Pvt) Ltd the agents for LiveLine Technology in Zimbabwe.

Please feel free to contact the undersigned for any clarifications.

Yours faithfully

Eng. B. Siso
